

Darshan Kumar Jha

+91-9142091776 — darshanjha18677@gmail.com — LinkedIn — GitHub

PROFESSIONAL SUMMARY

Detail-oriented Software Developer and 3rd-year Cybersecurity student with a focus on building secure, scalable full-stack applications. Proven track record in developing intrusion detection systems and zero-trust architectures. Expert in the MERN stack with a deep foundation in Data Structures, Algorithms, and network security tools.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), Python, Java, C++, C

Web Development: React.js, Node.js, Express.js, Flask, HTML5, CSS3, Tailwind CSS

Databases: MongoDB, SQLite

Security & Tools: Metasploit, Burp Suite, Wireshark, Nmap, Git, GitHub, Figma UI/UX

EXPERIENCE

Content & Documentation Specialist — RB Digital April 2026 – Present

- Managed business portfolios across Meta Business Suite, ensuring consistent brand presence.
- Edited and refined technical project documentation for cross-functional initiatives under RB Digital.

Full Stack Web Developer Intern — WeIntern January 2026 – March 2026 (3-Month Program)

- Collaborated on building and maintaining scalable web applications using full-stack technologies.
- Demonstrated commitment to agile development practices and high-quality code delivery.
- Contributed to technical solutions under an AICTE-recognized internship framework.

TOP PROJECTS

AetherGuard Network Sentinel — Python, Flask, ML

- Developed an adaptive Machine Learning-based Intrusion Detection System (IDS) capable of real-time network traffic visualization.
- Architected a full-stack dashboard to bridge complex ML backend processes with a responsive user interface.
- **Impact:** Optimized threat detection by processing and visualizing live data streams efficiently.

CarbonSentinel — React, Node.js, Algorand

- Engineered a zero-trust security platform for carbon credit systems using blockchain-integrated smart contracts.
- Implemented secure API integrations and dynamic state management to ensure data integrity.
- **Impact:** Reduced unauthorized transaction risks by implementing decentralized authentication protocols.

EventFlow — MERN Stack

- Architected a college event management system with real-time communication features and RESTful APIs.
- Streamlined user registration and coordination for large-scale campus events.

ACHIEVEMENTS

- **Internal SIH 2025 Semifinalist:** Developed an offline AI-powered attendance system for rural education.
- **AI Fusion Hackathon (4th Place):** Built a predictive loan model with a Tableau data visualization dashboard.
- **Hack-Utsav 2k24 (4th Place):** Created a web application focused on high-precision URL security validation.
- **Hackathon 2k25:** Built a phishing link detection app to identify and flag malicious URLs.

EXTRACURRICULAR ACTIVITIES

- **Event Organizer, IEEE & YICC:** Coordinated logistics, managed team workflows, and drove participant engagement for technical youth events and coding initiatives.

EDUCATION & CERTIFICATIONS

- **B.Tech in Computer Science,** IILM University (2023 – Expected 2027)
- **Cybersecurity Fundamentals (CCYF™) Certified** (April 2026)
- **Deloitte Job Simulation: Software Engineering Certificate** (June 2025)
- **MongoDB Certified: Basic Student Course** (June 2025)
- **AWS Academy Graduate: Cloud Security Foundations** (January 2025)
- **Core Java Certification: Infosys Springboard** (November 2024)

HOBBIES & INTERESTS

- **Creative Media:** Graphic design and video editing, utilizing modern design suites to create digital content.
